☐ 1.   Document ID: US 6571295 B1

L5: Entry 1 of 3   File: USPT   May 27, 2003

DOCUMENT-IDENTIFIER: US 6571295 B1
** See image for **Certificate of Correction** **
TITLE: Web page annotating and processing

Brief Summary Text (9):
The redirector next retrieves the HTML for the specified Web document from an
appropriate document server, replaces any URLs in the HTML with its own URL, and
saves the replaced URLs. If the user previously had made any annotations or had
added any other custom information to the Web document, the annotations and/or
other custom information were stored in the redirector at that time. The redirector
modifies the HTML of the requested document to include any previously added
annotations, if the user wants such annotations displayed. The redirector also
modifies the HTML so that various input forms for allowing user input (such as
"buttons", text boxes, etc.) will be displayed by the browser. The HTML for the
document, the HTML for the input forms, and the HTML for the annotations are
collectively termed "augmented HTML." The augmented HTML is then sent to the
browser, which displays the document along with the input forms and (possibly) any
annotations previously added by the user.

TITLE: Method and system for processing document requests in a network system

Detailed Description Text (28):
Preferred embodiments were described with respect to presenting a substitute ADFILE
before the user could retrieve the file at the requested URL. However, in
alternative embodiments, the ADFILE may be presented to the client 8 after the web
page at the requested URL is provided to the user or at some other moment in
processing the client request.

☐ 3. Document ID: US 6081829 A

L5: Entry 3 of 3   File: USPT   Jun 27, 2000

DOCUMENT-IDENTIFIER: US 6081829 A
TITLE: General purpose web annotations without modifying browser

Brief Summary Text (9):
The redirector next retrieves the HTML for the specified Web document from an
appropriate document server, replaces any URLs in the HTML with its own URL, and
saves the replaced URLs. If the user previously had made any annotations or had
added any other custom information to the Web document, the annotations and/or
other custom information were stored in the redirector at that time. The redirector
modifies the HTML of the requested document to include any previously added
annotations, if the user wants such annotations displayed. The redirector also
modifies the HTML so that various input forms for allowing user input (such as
"buttons", text boxes, etc.) will be displayed by the browser. The HTML for the
document, the HTML for the input forms, and the HTML for the annotations are
collectively termed "augmented HTML" The augmented HTML is then sent to the
browser, which displays the document along with the input forms and (possibly) any
annotations previously added by the user.
